

The tricyclic a year thousands of types of curing room for the battery industry, the world's largest supplier of curing chamber. In order to meet the new trends curing process, we developed a high-temperature fast curing chamber, in order to improve the quality of curing and shorten the curing time, extend battery life, increase the consistency of the battery.

imported PLC, touch screen monitor, multi-program (O) multi-segment (20) visual control in the bilingual operation.

three-dimensional air distribution, uniform indoor temperature and humidity, to ensure the consistency of the physical and chemical indicators of dry curing plate.

Japanese imports of plants wet and dry bulb temperature and humidity sensors, high temperature, corrosion-resistant, non-condensing, high accuracy.

atomized water and steaming two humidification can achieve low temperature and medium temperature curing, electric heating, steam or gas heated to choose from.
